Features of the RAPC Shearwater Solution

- Integrated navigation & chartplotting software
- Display of all on-board instrumentation (NMEA-2000 networking)
- High resolution sonar/fish-finder
- Active weather maps for marine environment (radar, wave, lightning and more)
- Visibility of on-board cameras
- 4G Internet access and on-board WiFi connectivity
- Audible alarm warnings, and SMS notification of alarms
- Single centralized touchscreen to display ALL information
- Ability to share the centralized screen (with full encryption security) to multiple terminals and tablets so that this information is readily available wherever you are located on your boat, or remotely via on-shore mobile devices (PC, Android and iOS)
- Industrial-grade to withstand high shock, and a wide range of temperatures and humidity
- Entire system can operate from a single 12VDC power supply

RAPC, a premiere provider of innovative and integrated marine systems and solutions, will work with you to design and integrate an innovative on-board marine computer solution for your vessel.

A Shearwater is a long-winged seabird that flies with stiff wings and uses a "shearing" flight technique to move across wave fronts with the minimum of active flight.
